

e-Synergy

e-Financials

Real-time financial reporting in a mouse click.

Provide your key decision makers with real-time insight into the financial status of the organization. Through the e-Financial functionality in e-Synergy, budgets can be generated or revised on the fly, supporting extensive "what-if" analyses. The health of the entire value chain, from supplier to business partner to customer is quickly discernable through a variety of embedded reports. With e-Financials you can:

- Secure, real-time visibility into corporate financial data with transaction level drill-down capability
- Rollup multi-division and multi-company data into a single view regardless of the back end accounting package used
- Perform extensive budgeting and "what-if" scenario analysis
- Obtain real-time visibility into sales revenue, payables, receivables and aging data

Using e-Financials helps companies to lower organizational boundaries, improve efficiency and manage their businesses more effectively. Organization-wide reporting and local insights provide robust functionality to companies of all sizes.

e-Synergy is a completely new solution based on Web technology, that allows organizations to enhance their overall efficiency. Internet technology can be so much more than posting a brochure on the Web or running your current application on a browser. Through the Web everything can be related or connected: computers, documents, customers, products, employees and a lot more.

e-Synergy makes these links quickly and efficiently. The solution can be used by both large and small organizations in any sector of business or industry. Wherever there is a need for information, and the need to link this information to the elements of an organization (employees, products and accounts), e-Synergy can help.
