

VIRTUALLY UNLIMITED REPORTING DEPTH AND DETAIL ARE ONLY A FEW CLICKS AWAY WITH EXACT SOFTWARE NORTH AMERICA'S ENTERPRISE REPORTING SYSTEM (ERS), A POWERFUL CLIENT/SERVER SQL-BASED REPORT-BUILDER AND INFORMATION ANALYSIS TOOL.

ERS's Data Mining allows users to navigate large amounts of data quickly and with ERS's visual design

Businesses today face a challenge unheard of in the past - information overload. Modern information systems provide far more data than any person can process or understand. So, how does a business extract the critical data it needs to thrive and grow?

As a solution to this problem, Exact Software North America presents the Enterprise Reporting System (ERS). ERS is a powerful Client/Server, SQL-based tool that combines reporting, query and advanced data mining technology with VBA extensibility and the ability to access multiple database engines simultaneously.

REPORTING IS ONLY THE BEGINNING

The traditional method of giving data to the people who need it is through a report. Using ERS Version 5.0's graphical Report Builder, a user can build new reports and extend existing reports without needing to modify source code. The ERS QuickReport allows fast ad-hoc queries into the database, and Progression's exclusive Data Mining feature allows users to graphically navigate large amounts of data quickly.

DATA IS RARELY ONLY IN ONE PLACE

The fast pace of technology has a price. Organizations often find themselves with critical business data stored on more than one database engine or legacy systems. ERS has the ability to communicate simultaneously with many data sources for cross database reporting and data manipulation.

BUILT-IN VBA EXTENSIBILITY

For report writing professionals and developers, ERS extends far beyond simple reporting. It provides a development tool for any task where data manipulation and movement are necessary. The built-in Visual Basic for applications (VBA) compatible development system allows developers to create robust solutions for complex reporting and procedural problems. Also, OLE compatibility allows ERS to interact with most productivity applications such as Microsoft Word and Excel.

TASK DEPLOYMENT WITH ERS V4.1

You can deploy any ERS function to the desktop or set functions up to be called directly from the Progression menu structure. This offers a quick, seamless way to access data.

EXTENSIVE ERS FUNCTIONALITY

- ERS supports Dbase, Pervasive Scalable SQL and Microsoft SQL Server
- Full VBA language with Client/Server functional extensions
- OLE automation allows ERS to drive any OLE server such as Microsoft Word or Excel

- Advanced visual editor allows complex manipulation of reports
- Auto-link Intelligence suggests ways to link tables based on user choices and past user linkages
- Intuitive Query Builder interface allows complex queries to be built quickly
- Full database manipulation and write-back through VBA script allows any complexity of the business process to be modeled
- Real-time Data Mining provides efficient access to information through simple commands
- Dynamically linked graphing allows users to observe changes in data in real time
- ERS report scripts for many V7.6 Progression Series reports allows users to make modifications to reports without rewriting the entire report

MORE INFORMATION
