

Total Cost of Ownership & ROI

The Economic Advantage of V3 Virtualization

iPro IT's V3 VDI Solution offers a significantly reduced deployment cost compared with other VDI solutions. Technology administrators appreciate reduced complexity and improved end-user experience as well. Compared with physical desktops, the V3 VDI Solution can reduce the total cost of ownership (TCO) for each PC while improving speed, enhancing simplicity, and providing a scalable IT solution that can adapt to your enterprise's changing needs.

iPro IT's V3 VDI Solution achieves fast ROI and reduced TCO by reducing your physical PC expenses through time. Most organizations have a 3-4 year refresh cycle for their physical desktops. PCs running in a V3-powered environment cost significantly less to maintain, with improved performance, and greater longevity. Your refresh cycle is extended into 5-7 years per physical desktop.

Cost of Workstation *without* VDI

Purchase price of computer	1,200
Deployment	350
Operations (admin, downtime, patches)	950
Support, including software reload	1,300
Software/data retirement	430
Parts replacement	200
Upgrade hardware	200
Employee time (waiting or trying to fix)	360
Total 4 year cost	\$4,990

Cost of Workstation *with* VDI

Purchase of end-point device	350
Deployment	150
Operations (admin, downtime, patches)	200
Support, including software reload	300
Software/data retirement	0
Parts replacement	200
Upgrade hardware	0
Employee time (waiting or trying to fix)	80
VDI	1,200
Total 4 year cost	\$2,480

VDI can save you \$2,510 per workstation over 4 years.

Using averages from surveys by Microsoft, Gartner, Techaisle, and Nash Networks

With greater processing speed, simplicity of management, and ease of scalability, iPro IT's V3 VDI Solution is the best VDI value on the market. It can save you thousands of dollars per physical desktop while delivering better performance that not only improves the productivity of your enterprise but it enhances your profitability as well.
