

*“With V3’s desktop solution, the doctors do not get to use the zero client terminals because the nurses like them so much!”*

Hospital IT Administrator

## Healthcare

### Improve Patient Care

#### The Challenges

In the Healthcare industry, the most important metric is the quality of care provided to patients. Care levels are affected by how quickly care providers can access data needed to provide the best and most responsive care possible. A V3 powered system delivers the fastest and most flexible computing environment in the healthcare industry specifically designed to address key business drivers for healthcare IT delivery including:

- Improving quality of patient care
- Decreasing wait time
- Increasing staff productivity
- Protecting patient privacy and data
- Ensuring regulatory compliance, such as HIPAA
- Supporting a “practitioner flexible work-style” allowing access from a wide variety of devices and locations while ensuring high availability, performance and scalability
- Simplifying the management of complex IT solutions while delivering high-quality services

#### The Solution

**V3 Appliances** deliver 25 – 200 virtual Windows desktops per unit, with guaranteed performance that is 2x – 8x faster than physical desktops. V3 server appliances elegantly integrate into an existing VMware infrastructure, providing the computing and local storage needed for hosting virtual desktops. V3 Desktop Cloud Orchestrator software simplifies creating, managing and moving dedicated virtual desktops. This desktop management software aggregates key features that a desktop administrator would need from VMware’s vCenter and View into a single, centralized console.

#### What does this mean for you?

- For care providers, a V3 appliance solution helps improve patient care by giving access to personal virtual desktop from any IT-approved device, allowing staff and other caregivers to stay connected anytime, from anywhere with labs, offices, clinics, staff and patients.
- For healthcare administrators, a V3 appliance solution accelerates healthcare IT delivery, which allows providers to improve patient care and resulting outcome metrics, and enables staff to be more productive.
- For IT administrators, a V3 solution offers simple deployment and centralized management with increased performance.

## The Results

- Reduced desktop login times by up to 50%
- Quicker application and document loads resulting in faster virtual desktop performance
- Assured regulatory compliance through more controlled access and greater control of virtual datacenters and cloud environments
- Dependable protection for Patient Privacy because sensitive data is rendered, and not stored, on end points
- More controlled access and easier management with V3's optimized technologies and management tools
- Minimized downtime for administrative operations, upgrades, and maintenance
