

Speed

2-8x Faster Than Your Physical Desktop

iPro IT's V3 VDI Solution architecture makes it possible to add measurable performance improvements and high scalability to the value proposition of virtual desktops.

Increased Performance. V3 VDI Solution deliver the fastest desktop cloud infrastructure in the industry today.

V3 VDI Solution provides faster access time for working data and lower context switching, which minimizes unnecessary CPU usage when switching between applications to overcome the problems of slow performance and poor end user experience associated with VDI.

By keeping working memory (OS and Temp files) closer to the CPU, access latency is reduced by an order of magnitude while providing optimal use of local storage. This architecture only leverages shared storage (SANs and NAS) for persistent (user) data. So what does V3 mean to its Customers?

V3 Performance: Every V3 VDI Solution outperforms high-performance physical desktops. See figure below.

V3 Utilization: Every V3 VDI Solution maintains superior performance, even at full capacity with heavy workload users.

V3 Availability: Every V3 VDI Solution is delivered with V3's Management & Optimized Desktop Allocation Tools, which enable Customers to migrate and access their persistent or non-persistent desktops in the Cloud, either locally or remotely, without sacrificing performance.

Better technology performance leads to improved productivity, lower costs, and positions your enterprise to thrive.

Contact us for more information on how our V3 virtualized desktop infrastructure can help you reach the next level today.
