

Scalability

Deploy/Purchase According to Your Unique Needs

No other VDI solution offers more scalability and flexibility than iPro IT's V3 appliance and delivery mechanism.

Most VDI offerings are scalable but they come at a price, both financially and in terms of resources. A typical VDI requires a complex matrix of servers that demand a lot for your IT resources in terms of maintenance, hardware costs, and - perhaps most importantly - they deliver an inferior end user experience in terms of latency and accessibility.

iPro IT offers a superior solution. Because our V3 VDI solution density and performance are so high, deployments result in lower sprawl with efficient machines that "drop in" to scale either upward or outward, depending upon your organization's specific needs and objectives. If your operations are generally centralized you can easily scale up to accommodate growth and changing demands for processing power. Or, if your organization and staff are spread across multiple locations, you can simply scale out to obtain the same award-winning end-user experience.

Start with as little as 25 virtual desktops and scale upward or outward without compromising V3's Performance. Add more users as you need them without unnecessary costs or unreasonable demands on your finite IT resources.

iPro's V3 scalability advantages include:

- Easily able to accommodate additional users
- Scale up or out in a short amount of time
- Low strain on IT resources

Scale Up

Scale Out

When you consider iPro IT's advantages in speed, simplicity, scalability along with our low total cost of ownership, there's really no reason to delay boasting your organization's productivity. Contact us today to discover how our solid, reliable, and proven V3 technology can work for you.
